

2011 Coastal Zone Survey Results

Region	Hancock County
Number of people survey sent to	394
Number of surveys returned	55
Response rate (%)	14%

General comments

Need a N/A category where we do not need or want help

Maine Coastal Program - Are you representing the whole program and all its parts for this survey or just the HCPC? If the latter, how do you fit with all the other entities in the

Project categories are all important. Why not? The priorities on how to deal with the issues all depend on who will pay for the solutions. Last time I checked the government was broke - When we have money fix them all.

Comments

Answer for the town should come from the selectmen.

Comments

Roads maintenance and upgrades along with the items mentioned under water quality I would like to see Frenchman Bay as a NO DISCHARGE ZONE

This would require a lot of work between towns around the bay. Under Habitat Protection, I would like to see some Marine Protected Areas that are off limit to dragging to protect benthic and subtidal eelgrass habitats.

Pamphlets with building requirements in coastal flood zones for public distribution. Best Building practices brochures for coastal bank erosion.

Meaningful procedures to ensure species protection within the habitat.

Would love to see HCPC facilitate a cell phone tower plan for the entire island so we are not addressing the tower applications piecemeal.

Comments:

Cost too much to travel

Depends upon time and individual interests of our community as a whole.

Would depend on the project
