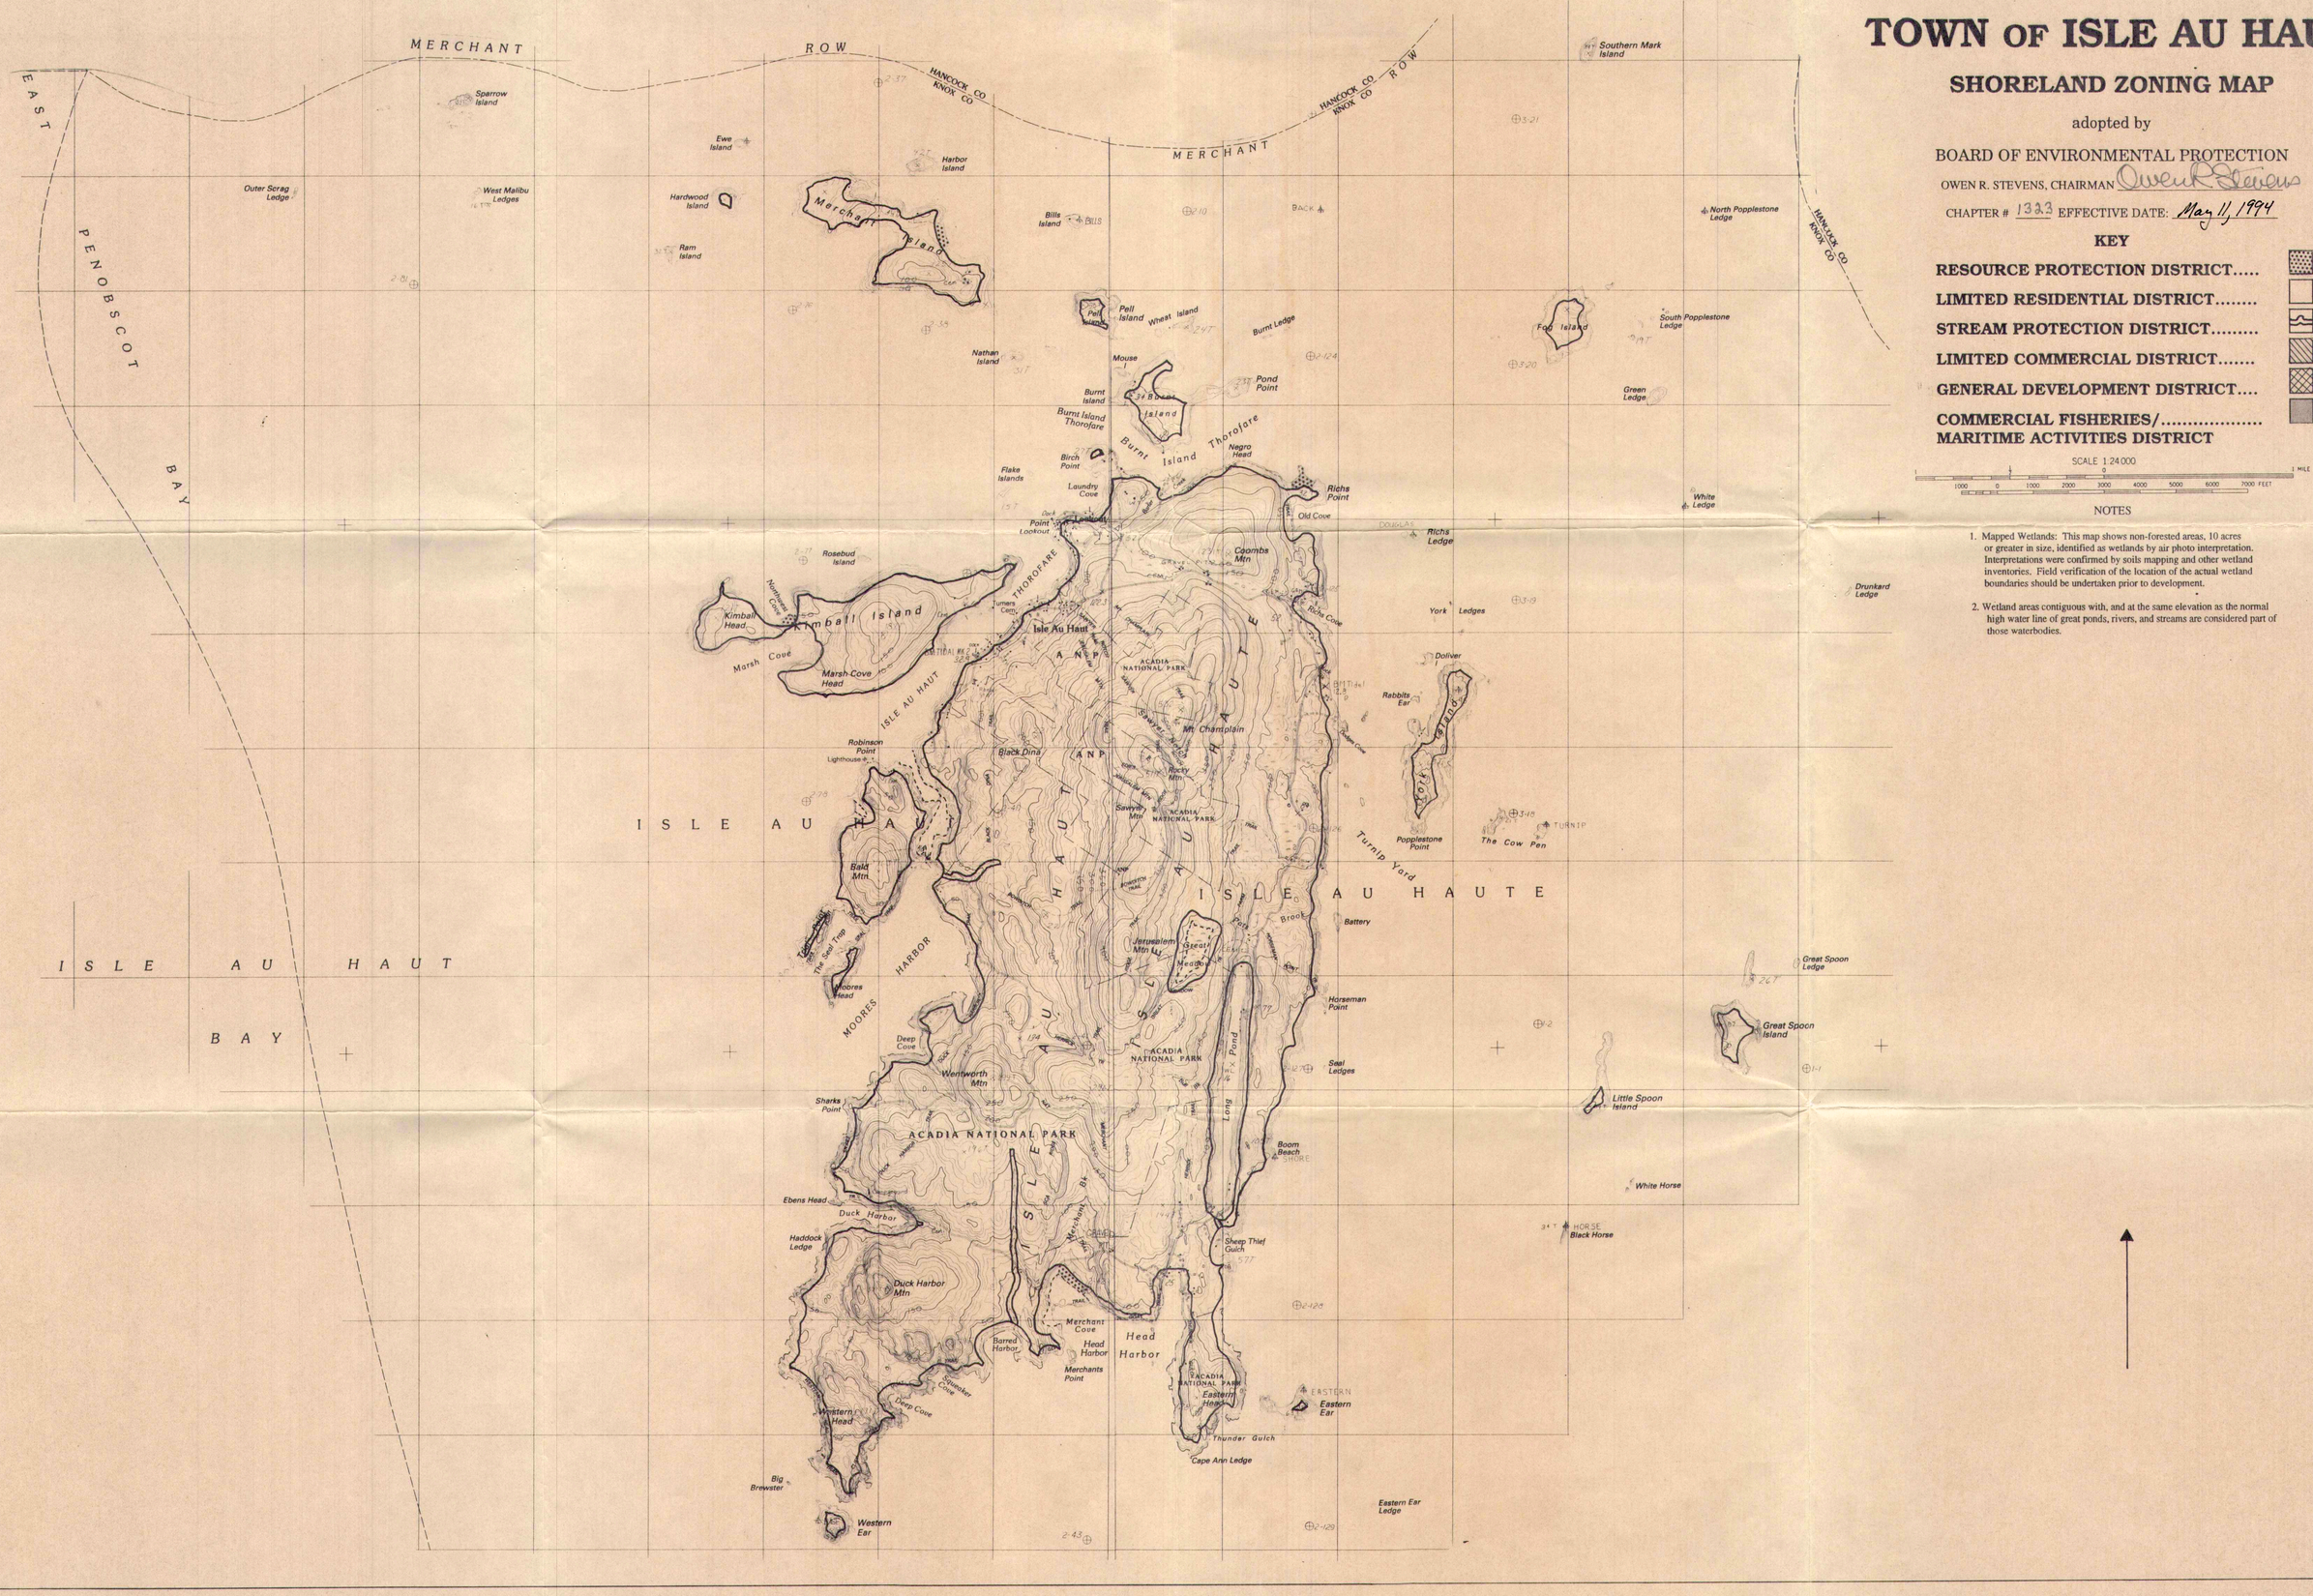
NOTES

1. Mapped Wetlands: This map shows non-forested areas, 10 acres or greater in size, identified as wetlands by air photo interpretation. Interpretations were confirmed by soils mapping and other wetland inventories. Field verification of the location of the actual wetland boundaries should be undertaken prior to development.


2. Wetland areas contiguous with, and at the same elevation as the normal high water line of great ponds, rivers, and streams are considered part of those waterbodies.
